About Sadolin

Sadolin – advanced technology underpinned by over 200 years of history...

Renowned throughout the professional and DIY markets for offering the very highest possible standard of wood protection, products bearing the Sadolin name benefit from the most recent advances in coatings technology ...yet at the same time boast a rich history and heritage stretching back over 200 years.

The Sadolin story is set in the harsh and unforgiving Scandinavian climate and the roots of this well respected brand can be traced back to 1777 when Swedish born Jacob Holmblad was granted royal permission to establish a textile dye works in Copenhagen. Nurtured by Jacob and handed down through the generations, this enterprise would eventually become a thriving paint and varnish business.

In 1912 Holmblad & Co merged with Sadolin's Farver company, founded just five years earlier by Gunnar Asgeir Sadolin. This young and experimental businessman was producing wax colours that were inspired by the fresh colours of Egyptian antiquities. Heritage and innovation came together, and hundreds of years later these two driving forces continue to underpin the Sadolin brand as it is known today.

TOP TIP

Opaque coatings are ideal for hiding timber imperfections.

* For detailed product information see pages 22, 27, 30 & 32

CONSIDERATIONS

BREATHABLE MICROPOROSITY

Some woodstains are waterproof - but they can also prevent natural moisture passing through the wood. This can make wood swell, breaking the bond between the coating and the wood.

Sadolin exterior products are designed to form a microporous 'jacket,' which is both waterproof and allows the wood to breathe naturally. The benefit is greater, longer lasting protection for your wood.

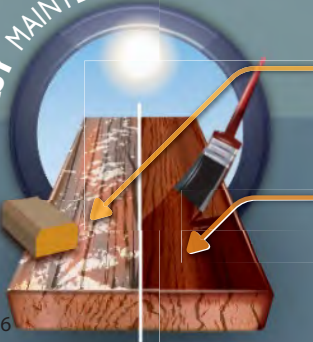

SUPERIOR COLOUR RETENTION

Exposure to sunlight and the weather causes conventional woodstains to fade over time.

Sadolin products use specially selected light-filtering pigments to promote longer-lasting colours.

EASY MAINTENANCE

The longer wood is exposed to the elements, the greater the risk of conventional woodstains blistering and peeling. Applying a new coat will require extensive sanding and preparation if wood is weathered.

Because Sadolin products are specially developed to weather naturally, applying a fresh coat requires only minimal preparation, reducing time, expense and labour.

CONSIDERING COLOURATION

Translucent woodstains will vary in appearance depending on the natural colour of the timber surface to which they are applied. For this reason, we recommend trial applications to ensure the acceptability of the final shade. The samples below represent the colour difference shown on softwoods and hardwoods when Antique Pine shade is applied.

Antique Pine - Softwood

Antique Pine - Hardwood

CONSIDERING TIMBER CONDITION

The condition of the timber may also influence your choice of coating. If the timber is unsightly, a translucent coating will not hide this, so an opaque finish would be preferable. If the timber is in good condition you may choose to highlight its natural beauty by applying a translucent coating.

CONSIDERING PRODUCT

There are both strengths and limitations when considering your choice between water or solvent based products. However, in order to avoid any potential problems we recommend that you are consistent through the whole system of application.

CONSIDERING APPLICATION TOOLS

Quality natural bristle brushes are best for solvent based systems, whereas we recommend synthetic brushes for water based.

CONSIDERATIONS

CONSIDERING APPLICATION

Coating all exposed surfaces and those that are susceptible to unwanted moisture ingress will provide the best protection. Particularly vulnerable are end grains, for example on decking and garden architecture such as pergolas. Window sills should be rounded off to avoid sharp edges where it is difficult to achieve an adequate film build. Finally, ensure sufficient product is applied. Window rebates and glazing beads should be fully coated prior to fitting.

CONSIDERING WHEN TO APPLY WOODSTAIN

We recommend that all of our woodcare products are not applied, or allowed to dry, in temperatures below 8°C or above 25°C. It is also important to consider that relative humidity levels should be below 80% during drying times.

If you are unsure of anything with regards to Sadolin woodcare products either consult our technical datasheets or contact our Sadolin Advice Centre on 0330 024 0298.

***Disclaimer for all colours within this card**

We recommend a trial application before commencing. The final colour will depend on the original colour and condition of the timber and the number of coats applied. The colours shown are printed as accurately as the printing process will allow, however they may not match the applied product.

Due to the limitations of in-can tinting slight variations in shade may be noted from tin to tin. This is most noticeable in pastel shades. To avoid variations in shade on large areas the 'boxing' technique of mixing together the contents of a number of tins is recommended.
